READING FOR WRITING

BOOK 1 **FOUNDATION**

중3 ~ 고1 · 읽고, 고르고, 직접 쓴다
스무 갈래 · 지문 40편 · 단원마다 영상 3편

학생용

GUIDE 이 책은 이렇게 공부합니다

한 단원 = 4쪽 · 영상 3편

1쪽 READING 1
도입 → 전개 → 결론, 글의 자리를 보며 읽는다. 굵은 문장은 시험에 다시 나오는 핵심 구문.

2쪽 수능형 3 + 서술형 2
요지·함의·일치로 이해를 확인하고, 요약문과 배열 영작은 직접 쓴다.

3쪽 READING 2
빈칸 추론과 어법을 고른 뒤, 틀린 어법을 고쳐 쓰고 이유까지 적는다.

4쪽 FIT WRITING
두 지문의 핵심 문장을 끊어 읽고, 조건 영작 · 요약 · 내 생각 쓰기로 마무리.

혼자 공부하는 순서

1. **QR 영상 보기** — 페이지 오른쪽 위 코드(예: YF-WR1-U01-R1)가 영상 제목과 같다.
2. **교재에 표시하기** — 끊어 읽기 / , 근거 문장 밑줄, 모르는 단어 동그라미.
3. **문제 풀기** — 영상에서 “일시정지” 나오면 멈추고 먼저 푼다.
4. **오답 다시 보기** — 틀린 문제는 정답 근거 문장을 찾아 노트에 옮겨 쓴다.

The Audience That Isn't There

아무도 앉아 있지 않은 객석

QR VIDEO YF-WR1-U01-R1

도입

You walk into class with a large coffee stain on your shirt. For the rest of the morning, you are sure that everyone has seen it. You keep your arms crossed, avoid raising your hand, and replay the moment again and again. By lunch, you feel as if the whole school has been talking about your shirt.

전개

Psychologists call this feeling the *spotlight effect*: **we believe that others notice our appearance and actions far more than they really do.** In one well-known experiment, college students were asked to wear an embarrassing T-shirt into a room full of other students. Afterward, the wearers guessed that about half of the people had noticed the shirt. In fact, far fewer had. The reason is simple. **Each of us lives at the center of our own experience, so our own mistakes look huge to us.** But the people around us are busy at the center of their own experiences, worrying about their own hair, their own grades, and their own words.

결론

Knowing this does not mean that nobody ever looks at you. It means that the audience in your head is much larger than the one in the room. Next time you make a small mistake, remember that most people will forget it before you do. That freedom is worth using: raise your hand, try the new thing, and let the spotlight go dark.

WORDS 영영 뜻으로 익힌다

stain	a dirty mark that is hard to remove	**replay**	to go over an event again in your mind
appearance	the way someone looks to others	**embarrassing**	making you feel shy or foolish
afterward	at a later time; after something happens	**center**	the middle point or most important place
audience	a group of people watching something	**be worth -ing**	to be good or useful enough to do

1 요지

다음 글의 요지로 가장 적절한 것은?

① 실수를 줄이려면 다른 사람의 시선을 늘 의식해야 한다.
② 옷차림은 첫인상을 결정하는 가장 중요한 요소이다.
③ 사람들은 자신의 실수보다 남의 실수를 더 오래 기억한다.
④ 남들이 나를 주목하는 정도는 내가 느끼는 것보다 훨씬 작다.
⑤ 다른 사람의 관심을 얻으려면 적극적으로 발표해야 한다.

2 함의 추론

밑줄 친 부분이 글에서 뜻하는 바로 가장 적절한 것은?

the audience in your head is much larger than the one in the room

① people in the room secretly judge us more than we think
② the attention we imagine is much greater than the attention we actually get
③ we should practice speaking in front of large groups
④ our memories of past mistakes are usually correct
⑤ other people's opinions matter more than our own

3 내용 불일치

윗글의 내용과 일치하지 않는 것은?

① The writer describes a student with a coffee stain on a shirt.
② In the experiment, students wore an embarrassing T-shirt into a room.
③ The wearers guessed that about half of the people noticed the shirt.
④ People around us are often busy thinking about themselves.
⑤ The writer says that nobody ever looks at other people.

The Order That Stays

도입

In the 1920s, a young psychologist named Bluma Zeigarnik became curious about a story from a busy restaurant. The waiters there could remember long, complicated orders ① that had not been paid for yet. But as soon as a table paid the bill, the details seemed to disappear from their memory.

전개

Zeigarnik tested this idea in her lab. She gave people simple tasks and stopped some of them ② before they could finish. Later, the people remembered the interrupted tasks better than the ③ completing ones. **Our minds seem to treat an unfinished job like an open door: it keeps _____ until we close it.** This is why a half-watched show or a half-solved puzzle can bother you all evening.

결론

The good news is that you can use this. If a big assignment ④ feels too heavy to start, just begin with five minutes of work. **Once the task is open, your mind will keep ⑤ returning to it**, and finishing becomes easier.

Make the Good Choice the Easy Choice

좋은 선택을 쉬운 선택으로

QR VIDEO YF-WR1-U02-R1

도입

Many people try to build better habits with willpower alone. They promise themselves to practice the guitar every day, to eat more fruit, or to stop checking their phones during homework. For a few days, it works. Then they get tired, and the old habits quietly return.

전개

The problem is often not a lack of effort but the space around us. **Our surroundings make some actions easy and others hard, and we usually choose whatever is easiest.** If your guitar stays in its case in the closet, you have to take several small steps before you play a single note. If it stands next to your desk, you can pick it up in seconds. The same idea works in the other direction. A phone on your desk calls to you every few minutes, but a phone in another room is easy to forget. **Instead of fighting yourself, you can change the room so that the right choice requires less effort.**

결론

This does not mean that willpower is useless. It means that a smart setup can do much of the work that willpower usually does. Put a bowl of fruit on the kitchen counter and the cookies on a high shelf. Leave your running shoes by the door. When good habits are easy to start, you will start them more often.

WORDS 영영 뜻으로 익힌다

willpower	the ability to control yourself and do hard things	**lack**	the state of not having enough of something
surroundings	the places and things around you	**closet**	a small room or cupboard for storing things
require	to need something	**setup**	the way things are arranged
counter	a flat surface in a kitchen for preparing food	**shelf**	a flat board on a wall for holding things

도입

Starting a new habit is hard because it has no fixed place in your day. You may want to read more, but when exactly will you do it? Without a clear signal, a busy day can make even a good plan ①invisibly.

전개

One simple method is called *habit stacking*. You attach the new habit to one you already do every day, using the pattern "After I do this, I will do that." For example: "After I brush my teeth at night, I will read two pages." The old habit ②works like a bell. Because you never forget to brush your teeth, the bell rings every night, and **the new habit gets a free ride on _____.**

결론

The key is to start small. **A new habit that takes less than two minutes is much easier ③to keep than a big one.** Choose an old habit that happens at the same time ④each day, and make sure the new action fits ⑤naturally after it. Over time, a small stack can grow into a whole routine.

WORDS 영영 뜻으로 익힌다

fixed

Where the Blue Comes From

하늘의 파란색은 어디서 올까

QR VIDEO YF-WR1-U03-R1

도입

On a clear day, the sky above you is a deep blue. But sunlight itself looks white, and the air we breathe has no color at all. So where does all that blue come from? The answer lies in a meeting between sunlight and the tiny pieces of air around us.

전개

Sunlight is actually a mix of all the colors of the rainbow. Each color travels as a wave, and blue light has shorter waves than red light. When sunlight enters the air, it hits countless tiny gas molecules. **These molecules scatter short blue waves much more strongly than long red ones.** Red and orange light, with their longer waves, mostly travel straight on. As a result, blue light bounces around the sky in every direction, and wherever you look, some of it reaches your eyes. **That is why the whole sky seems to glow blue, not just the area around the sun.**

결론

The same science explains a red sunset. In the evening, the sun is low, so its light must pass through much more air before it reaches you. Along the way, most of the blue light is scattered away, so only the colors that survive the long trip reach your eyes. That is what paints the evening sky orange and red. Noon or evening, the sky's colors follow the same simple rule.

WORDS 영영 뜻으로 익힌다

rainbow	a curve of colors in the sky after rain	**wave**	a moving form of energy, like light or sound
countless	too many to count	**molecule**	the smallest piece of a substance
scatter	to send something off in many directions	**bounce**	to hit something and move away from it

The Ice on Top

위로 뜨는 얼음

QR VIDEO YF-WR1-U03-R2

도입

Drop an ice cube into a glass of water, and it floats. This seems completely normal, but it is actually unusual. For most substances, the solid form is denser than the liquid form, so a solid piece sinks in its own liquid.

전개

Water behaves differently. As it freezes, its molecules line up in a pattern ①that holds them slightly farther apart. **As a result, ice takes up more space than the same amount of liquid water.** Because ice is less dense, it ②floats on top instead of sinking to the bottom.

결론

This unusual fact matters a great deal to living things. In winter, a lake freezes from the top down, not from the bottom up. The ice ③forms a layer on the surface, and this layer works like a lid ④what protects the water below from the cold air. **Thanks to this lid, the water under the ice stays _____, and fish can survive ⑤until spring.**

The Rock That Swam Away

헤엄쳐 사라진 바위

QR VIDEO YF-WR1-U04-R1

도입

Imagine a diver swimming slowly over a rocky sea floor. She looks at a rock covered in brown and green spots, and then the rock suddenly moves away. It was not a rock at all. It was an octopus, and it had been sitting right in front of her the whole time. She had looked straight at it and seen nothing but stone.

전개

An octopus can change its color in less than a second. Its skin contains thousands of special cells filled with colored pigment. **By opening and closing these cells, the octopus can turn red, brown, yellow, or even a pattern of spots.** It can also raise small bumps on its skin to copy the rough surface of a rock or the soft shape of seaweed. **What makes this even more amazing is that the octopus changes its look to match whatever is around it.** Scientists are still studying exactly how it chooses the right colors.

결론

Hiding is not the octopus's only talent. In aquariums, octopuses have been seen opening jars to reach food inside, and some have even found ways to escape from their tanks. With no shell to protect its soft body, the octopus survives by using its brain and its skin together. In a way, for the octopus, being clever is the shell it never had.

When a honeybee finds a field full of flowers, it flies back to the hive with good news. But how can a tiny insect tell the others where the food is? It cannot speak, and the inside of the hive ①is dark. Instead, the bee dances.

전개

The bee runs in a short straight line while shaking its body from side to side, and then it circles back and repeats the move. This is called the *waggle dance*. **The direction of the straight run tells the other bees which way to fly.** If the bee runs straight up, the flowers lie in the same direction as the sun. The length of the waggle ②shows distance: the longer the bee waggles, the _____.

결론

The bees that gather around the dancer ③feel its movements in the dark and then fly out to find the flowers for ④themselves. **In this way, a dance that lasts only a few seconds ⑤guide many workers to the same field.**

Tears at the Cutting Board

도마 위의 눈물

QR VIDEO YF-WR1-U05-R1

도입

You are helping in the kitchen, and your only job is to cut an onion. A few seconds later, your eyes begin to sting, and tears roll down your face. You are not sad at all, so why are you crying? Surprisingly, the onion is defending itself.

전개

An onion is made of many tiny cells, and each cell keeps certain chemicals in separate places. **When a knife breaks these cells, the chemicals mix and produce a new substance that quickly turns into a gas.** This gas rises from the cutting board and reaches your eyes. There, it irritates the surface of the eye, so your body makes tears to wash it away. Scientists believe this reaction helps protect the onion from animals that might try to eat it.

결론

You do not have to accept tears as part of cooking. **Since the problem starts with broken cells and a rising gas, you should deal with both causes.** First, put the onion in the refrigerator for a while before cutting it, because cold slows down the release of the gas. Second, use a sharp knife. A dull knife crushes the onion and breaks far more cells than a clean cut does. Instead of simply putting up with the sting, remember that a little science can turn a crying job into an easy one.

Take a bite of a hot pepper, and your mouth feels as if it is on fire. Your face turns red, and you may even start ①sweating. Yet the pepper is not actually hot. You could eat one straight from the refrigerator and still feel the burn.

전개

The cause is a chemical called *capsaicin*. Your mouth has tiny sensors that normally respond to heat. Their job is to help you avoid ②to burn your tongue on hot soup. **Capsaicin happens to switch on these same sensors**, so your brain receives a message of heat even though the temperature has not changed. In other words, the pepper _____.

결론

Many people reach for water when the burning starts, but it does not help much. Capsaicin acts like oil, so water tends ③to spread it around instead of washing it away. Milk is a better choice, because it contains fat and a protein, both of which ④help remove the capsaicin. **Next time you finish ⑤eating something spicy, try a glass of milk instead of water.**

Why the Home Field Helps

홈구장이 주는 힘

QR VIDEO YF-WR1-U06-R1

도입

Sports fans often say that their team plays better at home, and the records seem to agree. In soccer, basketball, baseball, and many other games, teams tend to win more often in their own stadium than on the road. This pattern is so common that people have a name for it: the *home advantage*.

전개

What makes home so helpful? There is probably no single answer. First, **players who know a field well can move through it with more confidence.** They are used to the lights, the grass, and even the way the ball bounces off the walls. Second, the home team does not have to travel. Visiting players may spend hours on buses or planes, sleep in strange beds, and arrive tired. Third, there is the crowd. **Thousands of cheering fans can give players energy when the game gets hard**, and their noise can make it difficult for visiting players to hear one another.

결론

Still, home advantage is not magic. It can give a team a small push, but it cannot turn a weak team into a strong one. Strong teams win away from home, and weak teams lose in front of their own fans. In other words, the stadium can lend a hand, but it cannot play the game. A team still has to train hard and play well, wherever the game happens.

Today you can scan a small black-and-white square to open a menu, pay for snacks, or join a class website. That square is called a QR code, and *QR* stands for "quick response." Surprisingly, it was not invented for phones at all.

전개

The QR code was created in Japan in 1994 by a company called Denso Wave. Car factories at the time used barcodes to keep track of parts, but **workers often had to scan several barcodes for a single box, which took a lot of time.** A barcode can also hold only a small amount of information. The new code solved both problems. It stores data in two directions instead of one, so a single small square can carry much more. It also has three larger squares in its corners. **These squares tell the reader where the code begins, so it can be read from any angle.** Workers no longer had to line up every label perfectly.

결론

Later, when mobile phones gained cameras, the code moved from factories into everyday life. Denso Wave also allowed people to use the code for free, which helped it spread around the world. Today, people use QR codes for tickets, payments, and much more. In the end, a tool made for counting car parts ended up in almost every pocket.

Long Beats Strange

Many websites ask you to put strange symbols like # or % in your password. So people often choose a short word and add a symbol or two. But computers that try to guess passwords are extremely fast, and short passwords are easy for them to break.

전개

Many security experts now say that length matters more than strange symbols. **The ① long a password is, the more guesses a computer needs to find it.** Each extra character multiplies the number of possible passwords. One easy way to make a long password is to use a *passphrase*: several random words ② joined together, like *purple lamp river cookie*. It is _____. You can picture it in your mind, but a stranger cannot guess it.

결론

Of course, a passphrase only works ③ well if the words are truly random. A line from your favorite song is ④ much easier to guess. Also, never use the same password for every site. **Choose four or five unrelated words, and you will have a password that is both safe and easy ⑤ to remember.**

Islands of Heat in a Sea of Green

초록 바다 위의 열섬

QR VIDEO YF-WR1-U08-R1

도입

On a hot summer afternoon, step out of a shady park and onto a busy city street. You can often feel the difference right away. The air seems heavier, and the sidewalk feels hot even through your shoes. This is not just your imagination. Cities are often warmer than the countryside around them, and scientists call these warm areas *urban heat islands*.

전개

The main reason lies under our feet. **Concrete and asphalt absorb the sun's heat during the day and release it slowly at night.** As a result, many cities stay warm long after the sun goes down. Cities also have fewer trees and plants. In the countryside, plants cool the air by giving off water through their leaves, and their shade keeps the ground from heating up. In addition, cars, air conditioners, and factories all add heat of their own. On a still summer night, all this extra heat can make it hard for people to sleep.

결론

The good news is that cities can cool themselves down. **Planting more trees along streets creates shade and cooler air.** Painting roofs in light colors also helps, because light surfaces reflect sunlight instead of soaking it up. Some cities have already started both kinds of projects. In a sense, a cooler city begins with what covers its streets and roofs.

When baby sea turtles hatch on a beach at night, ①its first job is to reach the ocean quickly. They find it by moving toward what looks brightest. On a natural beach, this is the open sky over the sea, which shines with the light of the moon and stars.

전개

Today, however, many beaches are lined with hotels, streetlights, and houses. These lights ②are often much brighter than the sky over the sea, so the young turtles crawl toward the land instead. Many of them get lost or tired before they ever reach the water. Turtles are not the only victims. Some birds that fly at night can also be confused by brightly lit buildings. In short, artificial light at night can _____.

결론

Fortunately, this problem is ③easier to fix than many others. **Some beach towns ask people to turn off or cover outdoor lights when turtles are nesting.** Others use lights ④that point down at the ground. **Unlike many kinds of pollution, light pollution disappears the moment we ⑤switch off the light.**

The Price You Don't See

Minji has a free Saturday and two choices. Her favorite band is playing a concert downtown, but she had planned to spend the day studying for a science test on Monday. The concert ticket costs 30,000 won. She has enough money, so the choice seems easy at first. Is that the real price of going to the concert?

전개

Economists would say no. **The real cost of a choice is the value of the best thing you give up to make it.** They call this the *opportunity cost*. If Minji goes to the concert, she pays 30,000 won, but she also gives up a full day of studying and maybe a better grade. If she stays home to study, her opportunity cost is the concert: the music, the fun, and the memories of that day. Either way, she loses something. **Every choice has a hidden price, even when no money changes hands.**

결론

Thinking about opportunity cost does not tell Minji which choice is right. Only she can decide what matters more to her. Sometimes the answer will be the concert, and sometimes it will be the books. But it helps her see the whole picture before she decides. After all, the price tag shows only part of what we pay. So before you say yes to something, ask yourself one more question: "What am I saying no to?"

Too Many People to Help

사람이 많을수록 아무도 돕지 않는 이유

QR VIDEO YF-WR1-U10-R1

도입

Imagine that a woman falls on a busy street and cannot get up. Dozens of people walk past her. Some slow down and look, but most keep walking. Every one of them seems to think the same thing: "Someone else will help her." In the end, she may wait a long time before anyone stops.

전개

Psychologists call this the *bystander effect*. **The more people there are around an emergency, the less likely any one of them is to help.** In several studies, people who were alone with someone in trouble usually acted quickly. When other people were present, they often waited, looked around, and did nothing. This is not because people are cold or selfish. When responsibility is shared by a crowd, each person feels only a small piece of it. People also check how others are reacting. If no one moves, they decide that the situation must not be serious.

결론

This means that a crowd of possible helpers can quietly turn into a crowd of watchers. So what should you do if you ever need help in a public place? Do not just shout, "Somebody, please help!" Instead, point to one specific person and make a clear request: "You in the red jacket, please call 119!" **Once one person has been chosen, the responsibility is no longer shared**, and that person is far more likely to act.

Think about the words you used today. You may have taken a *bus*, eaten *ice cream*, or turned on a *computer*. Not one of these words started in Korean. They came from English and became part of everyday Korean speech. This is not unusual at all. Almost every language in the world has borrowed words from other languages.

전개

Words that move from one language into another are called *loanwords*, and English is full of them. **The word "tsunami" comes from Japanese, and "piano" comes from Italian.** Even "ketchup" probably comes from the name of a fish sauce used in southern China. Usually, a language borrows a word when its speakers meet something new and have no name for it. When people discovered a new food, tool, or idea from another culture, it was often easier to take the foreign name than to make a new one.

결론

Borrowing also goes in many directions. Today, people all over the world order *kimchi* using a Korean word. So loanwords are more than strange spellings in a dictionary. They are footprints left behind when two cultures meet. **By following them, we can learn where people traded, traveled, and learned from each other.** The next time you use a borrowed word, think about the long journey it took to reach you.

도입

When people give a speech, they are often told to get rid of sounds like "um" and "uh." These little sounds, called *fillers*, are usually seen as signs of a nervous or ①unprepared speaker.

전개

However, some language researchers suggest that fillers are not just random mistakes. In a conversation, a long silence can make listeners think that you ②have finished, and someone else may start talking. An "um" fills that silence. **It tells the listener, "Wait, I'm still thinking, and I'm not done yet."** In this way, fillers help speakers _____. Some studies even suggest that listeners pay closer attention to the word that comes ③right after an "uh."

결론

Of course, too many fillers can make a speech ④hard to follow. But a few of them are a normal part of talking, not a sign of a weak mind. In fact, similar sounds ⑤use by speakers of many languages. **In small numbers, fillers can actually keep a conversation smooth**, so there is no need to fear every "um."

The Art of Empty Space

비어 있는 곳의 예술

QR VIDEO YF-WR1-U12-R1

도입

When most people draw a picture, they focus on the main subject: the cat, the tree, or the face. The empty area around it seems like nothing, just the part that is left over. Many beginners even try to fill every corner of the paper because they are afraid that blank space will look lazy or unfinished.

전개

Artists and designers see it differently. They call the empty area *negative space*, and **they treat it as carefully as the subject itself.** Negative space gives the eye room to rest, so the main subject stands out more clearly. It can also create a second image. In one well-known drawing, you can see either a vase or two faces looking at each other, depending on whether you focus on the white part or the black part. **Some logos hide a small arrow or animal in the space between their letters**, and viewers who notice it rarely forget it.

결론

So the next time you make a poster or a drawing, do not rush to fill every empty spot. Before you add something new, ask what the space is already doing for your picture. Remember that what you leave out can speak as loudly as what you put in. Leave some room, and let the space do part of the work.

다음 글에서 필자가 주장하는 바로 가장 적절한 것은?

① 그림을 그릴 때는 종이를 빈틈없이 채워야 한다.
② 디자인에서는 글자보다 그림이 더 중요하다.
③ 초보자는 유명한 작품을 따라 그리며 연습해야 한다.
④ 그림이나 디자인에서 빈 공간도 작품의 일부로 활용해야 한다.
⑤ 로고에는 숨은 그림을 반드시 넣어야 한다.

2 함의 추론

what you leave out can speak as loudly as what you put in

① artists should draw only very small subjects
② bright colors attract more attention than dark ones
③ the empty parts of a work can carry meaning, too
④ viewers prefer pictures with many details
⑤ a picture should explain itself with words

3 내용 일치

윗글의 내용과 일치하는 것은?

① Most beginners like to leave large empty spaces.
② Negative space can help the main subject stand out.
③ The vase drawing shows only one image at a time to everyone.
④ Designers think that empty space looks lazy.
⑤ The writer advises filling every empty spot on a poster.

Before the 1840s, most painters ①were stayed in their studios. Paint had to ②be mixed by hand from colored powder and oil, and it did not stay fresh for long. It was often stored in small bags made from animal bladders, which could burst easily and were hard to carry far.

전개

Then paint in small metal tubes ③was invented. The tubes could be closed tightly, so the paint stayed fresh, and painters could carry many colors in one box. **This simple tool made it much easier _____.** A group of French painters, later ④called the Impressionists, took full advantage of it. They set up their easels in fields, by rivers, and on busy streets to catch the light as it changed through the day.

Why Songs Stick

노래는 왜 머리에 남을까

QR VIDEO YF-WR1-U13-R1

도입

How did you first learn the alphabet? If you are like many children, you did not memorize twenty-six letters one by one. You sang them. Even years later, some people still hum that tune quietly when they need to put words in alphabetical order.

전개

Why does a song work so well? **A melody gives words a clear shape that is easier to remember than a plain list.** The rhythm divides the words into small groups, and each group has its own place in the pattern. If you forget one part, the tune helps you guess what comes next, because the music tells you how many beats are left. Rhyme helps, too: when one line ends with "tree," the next line ending with "me" just feels right. **You may find it easier to recall the words of an old song than what you studied last week.**

결론

This is why teachers and parents have long used songs to teach things like numbers, the days of the week, and safety rules. You can use the same trick. If you have a list of words to memorize, try putting them to a tune you already know. Sing it a few times, and the list may start to stay with you. In a way, the tune becomes a hook that your memory can hang the words on.

Letters Shaped Like Speech

말소리를 닮은 글자

QR VIDEO YF-WR1-U14-R1

도입

About six hundred years ago, most people in Korea could not read or write. Writing meant using Chinese characters, and learning thousands of them took years of study. Farmers, merchants, and servants had no time for that, so they could not write down their own thoughts or read official notices.

전개

King Sejong saw this problem and decided to solve it. He created a new set of letters and announced it in 1446 under the name *Hunminjeongeum*, meaning "the correct sounds for teaching the people." **What makes the system special is that its letters were designed to show how we make sounds.** For example, the consonant ㄱ reflects the shape of the tongue as it blocks the throat, and ㅁ is drawn like the shape of the mouth. The vowels were built from three simple marks: a dot for the sky, a flat line for the earth, and a standing line for a person.

결론

Because the letters follow the logic of sound, ordinary people could learn them in days rather than years. One scholar who helped the king even wrote that a wise person could learn them in a single morning. Not everyone welcomed the change; some officials argued for keeping Chinese characters. Yet the letters survived, and today Koreans celebrate them every October. When you send a quick text message in Hangeul, you are holding a key that a king made for everyone.

It is the night before a big science test, and you have not finished studying yet. You make a plan: drink two cups of coffee, stay up until sunrise, and read every page one more time. It sounds like hard work, and hard work should always pay off. But your brain may not agree.

전개

While you sleep, your brain does not simply switch off. Scientists have found that **it replays and sorts the information you took in during the day**, keeping what seems important and moving it into longer-lasting storage. In this sense, sleep is less like turning off a computer and more like saving a file. When you skip sleep, much of the new information may never be properly stored. Studies have also shown that tired students have trouble paying attention, so even the pages they read at three in the morning may not stick.

결론

This does not mean that sleep can replace studying. **The brain can only save what you have actually put into it.** The smartest plan is to study steadily over several days and then let a good night's sleep finish the job. So the next time you are tempted to stay up all night, remember that closing your eyes may be the last and most important step of studying.

Imagine two friends who search for news about the same new city park on the same day. One sees articles praising its walking paths; the other sees complaints about its cost. Neither of them did anything wrong. They simply live inside different digital worlds, built by the apps they use every day.

전개

Most apps want you to keep scrolling, so they study what you click, like, and watch. Then they recommend more and more content similar to that. This seems helpful at first, because you get more of what you enjoy. Over time, however, **the more you click on one kind of story, the less you see of anything else.** People call this a *filter bubble*: a space where the information that reaches you has been quietly chosen to match your past choices. Inside the bubble, it is easy to believe that everyone thinks the way you do.

결론

The bubble is not a wall, though, and you can step outside it. **Try following sources that you would not usually choose**, read news from more than one place, and search for opinions that differ from your own. You do not have to agree with them. The goal is simply to make sure that the window you look through is not the size of a keyhole.

In one study, researchers found that a large share of the news links ②posted on a social media site had never been clicked by anyone. People saw a headline, felt something strong, and pressed the share button.

전개

The problem is that a headline is written to grab attention, not to tell the whole story. A title such as "Scientists Say Chocolate Is Good for You" may hide ③what the study really found: perhaps only a small benefit in a small group of people. **A reader who shares only the headline _____.**

결론

Suppose a stranger gives your friend ten dollars, with one simple rule. Your friend must offer you some part of the money. If you accept the offer, you both keep your shares. If you refuse it, neither of you gets anything. Your friend offers you only one dollar and plans to keep the other nine. What would you do?

전개

This situation comes from a famous experiment called the *ultimatum game*. If people cared only about money, the answer would be easy: one dollar is better than nothing, so you should always say yes. **Yet in many studies, people often reject offers that seem very unfair**, even though rejecting them means walking away with nothing at all. Interestingly, many of the people who make the offers seem to expect this reaction. Instead of offering as little as possible, they often suggest a split that is close to half.

결론

What does this tell us? **We are willing to pay a price to protect fairness.** Saying no to one dollar is a way of saying, "I will not reward unfair treatment." In that sense, the lost dollar is not wasted but spent on a message. Fairness, it seems, is something we value even when it costs us, and something we expect from others in return.

Using someone's words or ideas without ① saying where they came from is unfair for the same reason: it takes away credit ② that belongs to another person.

전개

Giving credit is simple. When you use a fact, a quote, or an idea from someone else, mention the source. Many students avoid doing this because they want to present ③ them as original thinkers. They worry that sources will make their work look borrowed. In fact, the opposite is true. **Citing sources shows readers that your claims are _____**, and it lets them check the information for themselves.

Your friend is confused about a math problem, and you offer to help. As you start to explain, something surprising happens. You find a gap in your own understanding, so you stop, think, and fix it. By the time your friend finally gets the answer, you understand the problem better than ever.

전개

Some researchers call this the *protégé effect*: **we often learn a subject more deeply when we prepare to teach it to someone else.** A protégé is a person who is guided by a teacher, but in this case, the teacher learns too. In one study, some students were told that they would later teach a passage to others, while the rest were told that they would simply take a test on it. The first group remembered more of the passage, even though nobody actually taught anything. **Expecting to explain something makes us organize it**: we look for the main idea, put the steps in order, and notice what we still don't know.

결론

This does not mean that you need a real student. You can explain a lesson to a younger brother, a pet, or even an empty chair. What matters is putting the ideas into your own words. In other words, the fastest way to fill your own head is to empty it out loud. So the next time you study, try being the teacher for a few minutes.

전개

Think about the last time you told a friend about a bad day. Halfway through your story, your friend jumped in: “That’s nothing. Listen to what happened to me!” He had been nodding the whole time, but you could tell that he wasn’t really listening. He was just waiting for his turn to talk.

전개

Many of us listen this way without noticing it. While the other person is speaking, we are busy planning our next sentence. **Real listening means paying attention to the speaker’s words instead of our own thoughts.** Good listeners do two simple things. First, they ask follow-up questions, such as “What happened next?” or “How did that feel?” These questions show that they want to hear more. Second, they repeat back what they heard in their own words: “So you felt left out when nobody called you.” **This gives the speaker a chance to say “Yes, exactly” or to correct a misunderstanding.**

결론

These habits may sound small, but they change how a conversation feels. People who feel heard are more likely to open up and trust us. In a way, the best thing you can say is often a good question. So the next time a friend talks to you, try to listen to understand, not just to reply.

The Ship That Kept Changing

QR VIDEO YF-WR1-U20-R1

도입

An old Greek story tells of a ship that once belonged to the hero Theseus. The people of Athens kept the ship for many years to honor him. Whenever a wooden plank grew old and rotten, they removed it and put a new one in its place. Year after year, the work went on. After a long time, not a single original plank was left.

전개

This raises a famous puzzle. **Is the ship in the harbor still the ship of Theseus, even though every part of it has been replaced?** Some people say no, because nothing from the first ship remains. Others say yes, because the ship changed slowly, one piece at a time, and it was always cared for as the same ship. **The puzzle becomes even harder if someone collects the old planks and builds a second ship from them.** Which one is the real ship then?

결론

Thinkers have argued about this question for centuries, and it still has no simple answer. But the puzzle says something about us, too. Many of the cells in your body are slowly replaced, and your tastes, friends, and ideas change over the years. Yet you still feel like the same person you were as a child. Perhaps what makes you yourself is not your parts but your story.

The Case of the Missing Sock

사라진 양말 사건

QR VIDEO YF-WR1-U20-R2

도입

You take your clothes out of the dryer, and one sock is missing. Maybe a thief broke in and stole a single sock. Mayb the machine has a secret hole. Or maybe the sock is stuck inside a shirt. All three ideas explain the facts, but one o them ①clearly makes more sense.

전개

A rule called *Occam's razor* helps here. It is named after William of Ockham, an English thinker who lived about 70 years ago. **When two explanations fit the facts equally well, the simpler one is usually a better place to start.** Th thief idea sounds exciting, but if you ②choose it, you would need many extra guesses: someone got in, wanted onl one sock, and left no other sign. Every extra guess is another chance to be wrong, so it is wise t _____.

결론

Of course, the simplest answer is not always ③true. Sometimes the world really is complicated. But Occam's razor tel us where to look first. **Check the shirt before you ④call the police**, and keep ⑤searching if the sock is not there.

3 내 생각 쓰기 서술형

몇 년 전의 나와 지금의 나를 비교하여, A few years ago, I ~. Now ~, but I am still ~. 의 흐름으로 영어 두 문장을 쓰시오.

어법 FIT · If + 과거동사, would + 동사원형 — 가정법 과거는 짝을 맞춘다

현재 사실과 다르거나 일어날 것 같지 않은 일을 상상할 때 가정법 과거를 쓴다: If + 주어 + 과거동사(be동사는 were), 주어 + would/could + 동사원형. if you chose it, you would need many extra guesses (그것을 고른다면 추측이 많이 필요할 텐데). If I were you, I would check the shirt first.

형태는 과거지만 뜻은 '현재'의 상상이다. 실제로 일어날 수 있는 일은 조건문: If it rains, we will stay home (if절 현재, 주절 will). 주절에 would가 보이면 if절 동사가 과거인지 꼭 확인한다.
